

Allsweld ADP-200-3 is a single-phase, 200 Amp, multi-function inverter generator for mig pulse, mig double pulse, MIG-MAG, Stick and TIG Welding (with "Lift" type ignition).

This versatile 3 torch system can be set up with steel, silicone bronze, aluminum, or any combination.

Allsweld ADP-200-3

- Lightweight and portable with 2 gas tank positions.
- Easy weld setup and programming with single button selectable options.
- Single or double-pulse operation.
- Double roller drives for accurate and consistent wire feed.
- TIG and stick welding capable.

The **Multifunction synergic power source**, based on the leading edge IGBT inverter technology has full digital control, and offers premium welding quality in both MIG/MAG and Pulsed, Dual-Pulsed MIG on all materials, especially stainless steel, aluminum and galvanized steel. The spatter-free welding feature minimizes reprocessing work and also ensures excellent performance in TIG and Stick welding processes.
